Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English Brand New Book ***** Print on Demand *****.Excerpt from The Monthly Microscopical Journal, Vol. 15: Transactions of the Royal Microscopical Society, and Record of Historical Research at Home and Abroad In the case of *Dionaea*, Darwin gives a very brief description of minute glands of a reddish-purple colour which cover the upper side of the leaf, and which he states to have the power of absorption. But in order to find an adequate description of these bodies we must go back nearly thirty years, when Dr. Lindley gave accurate descriptions and figures of them in his *Ladies Botany*, published in 1834, and, in the following words, showed a wonderful insight into their probable function: - From the cuticle of the upper surface of the leaf of *Dionaea* there spring at short intervals little red glands, which grow from minute green oval spaces, composed of two parallel green cells and resembling stomates. They are firm fleshy bodies resembling little convex buttons, and are composed of cells arranged in a circular manner round an axis consisting of two such cells stationed one on the top of the other. I presume that these glands are analogous to the curious hairs of *Sundew*, although we do not see that they are possessed of any irritability; but in the *Sundew* they arise from a general expansion of the cuticle and not from spurious stomates. We moreover find upon the surface a prodigious number of red glands, so minute as to be individually invisible to the naked eye, and giving a red tinge to the leaf. Such glands are found nowhere except upon the upper surface of the leaf in the neighbourhood of the delicate seat of irritability. It is not...
