Not illustrated. 1922 Excerpt: . . . began ripening their fruit more than 2 weeks ahead. We also find that the yield of the block plants as in nearly every instance been more than double that of the unblocked ones. The results obtained for the past 3 years are in my opinion easily explained. Any gardener at all familiar with the business will readily understand that a plant with a chunk of dirt 5 inches square filled with a mass of fine hair roots ready to go to work as soon as set in the field will easily out-grow and out-yield a plant that has been dug or pulled out with but a few roots and which is compelled to begin life all over again before it can get down to its life task of producing fruit, I am sending you a report of the tomato demonstration on my farm this year with blocked and unblocked plants. When I first heard you explain the blocked system, 2 years ago, I took it as all theory, that might do for some one to play with, and not much good for an ordinary farmer who wants to make money. If you have any more theories of this kind, send them along as the following report will show what it has meant to me. Next year the seed selected by you will be given a test. Few tomato growers in North Jersey fertilize with the same material. On the majority of farms, large quantities of...
