By Wistar Institute of Biology

General Books LLC. Paperback. Book Condition: New. This item is printed on demand. Paperback. 150 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1920 Excerpt: . . . in the relatively small number of living forms with bilateral eparterial bronchial trees. From it Aeby derived all the remaining types by reduction and final suppression of the eparterial component on the left side in the vast majority of the living mammalia, or on both sides in the only instance of a bilateral hyperarterial tree then known to exist, *Hystrix cristata*. Aeby hence regarded the mammalian lung as having undergone, in its modern prevalent type, a process of devolution or regression, to a greater or lesser degree, and his hypothesis can hence be briefly defined as the Reduction Theory. At the time of Aebys publication the embryology of the mammalia and of the vertebrates generally was imperfectly known, and he confidently looked forward to the support of his hypothesis through future ontogenetic investigations. He was disappointed in the first of these when His (24)...

Reviews

The most effective publication i ever go through. It really is writter in simple phrases and not hard to understand. I am just easily will get a satisfaction of looking at a written publication.

-- **Ila Pfeffer IV**

It in a of my personal favorite pdf. Of course, it really is play, nevertheless an amazing and interesting literature. It is extremely difficult to leave it before concluding, once you begin to read the book.
